Targeting Teenagers

Advertising & Marketing Strategies

Targeting Teenagers

Over a billion pounds is spent every year in order to target teenage customers. It's nearly impossible to visit a shopping center or switch on TV without finding products and advertisements that many adults may be not interested in or even understand. Why are teenagers, a group with relatively little earning power, such targeted customers?

Today's teenagers have an unprecedented amount of money to spend on personal items. They have more money to spend than teenagers of any previous generation. Many of them receive money from their parents on a regular basis, and some teenagers earn money from part-time jobs. Around the world, there are millions of teens with a disposable income to spend on clothing, electronics, and other items. Because young people make a lot of purchasing decisions for these objects, companies market them with teenagers in mind.

Another reason teens are so important to marketing departments is that they influence the spending of their families. In some countries, such as the United Kingdom and Canada, teenagers may have an influence on up to **70%** of the purchases for the home. Teenagers often have a say in the brands that the family buys, whether the products are food or personal care items like shampoo or soap. In fact, advertisers often market directly to teens because they know that teenagers can be very powerful and persistent about getting their parents to buy things or give them money to buy things themselves.

Targeting Teenagers

Marketing departments know that getting people to switch brands can be tough. Therefore, it is important to attract customers who have not yet developed strong brand preferences or brand loyalty. Older teens who are getting to leave school and become consumers are a perfect target for marketing companies.

Because their money, influence and potential, teens are big business for most major companies. As a result, advertisers have many techniques to get teens to buy their products. Here are some of the most popular ones.

A Perfect World

This technique presents an ideal world – everyone is attractive and hip, with the latest fashions and trendiest haircuts. The families are well off. They have expensive cars and homes. Families in these ads are smiling and they get along amazingly well. These ads represent the world that most teens would like for themselves.

Family Fun

Bringing the family together in the appeal of this technique. Advertisers show a product as something that helps a family overcome struggles with each other or a difficult task. The product is often the reason the family come together; for example, dad brings home dinner from the family's favourite fast-food restaurant and then suddenly the quarrelling brother and sister set aside their differences and enjoy a meal with their parents.

Bandwagon

Join the crowd! Everyone has one. Don't be left out. This is the strategy of the Bandwagon technique. Advertisers try to convince the consumers that they need the product to be trendy. Usually advertisers do this by showing people who are awkward and unpopular. The people try the product and then suddenly become popular and cool.

Targeting Teenagers

These are just a few of the techniques advertisers use. There are also many others, including endorsements by star athletes, popular actors, and beautiful models. It is important for all consumers, including teens, to watch adverts critically. In other words, we should all think about whether we really want or need the product promoted in the advert, or whether we are simply responding to the marketing techniques.

From Farmlands to the Supermarket

In many countries in the latter half of the twentieth century, the general consent in the agriculture community was that food should be easy to buy and as inexpensive as possible. In order to achieve this, farmland needed to produce more crops, and food shopping needed to be more convenient. This attitude did not focus on the well-being of people or the environment. Fortunately, a number of successful pioneering projects show us that it's possible to have a balance between food demands and caring for the environment.

FAF (Fazenda Ambiental Fortaleza) – Brazil

 Brazil

Since the 1900s, the Barretto family has owned a coffee farm in Brazil. In 2002 they began transforming it into a model farm that uses environmentally sustainable techniques.

FAF now uses two methods for growing coffee: **organic** and **natural**. Both methods differ significantly from the conventional method in which the coffee plants are spaced far apart so that the tractor can drive through them. The tractor spreads fertilizers to make the coffee plants grow and herbicides to kill unwanted plants around the coffee crop.

In contrast, in the organic method, the only fertilizers used are natural. They are made from collecting the waste of the farm's cows. Furthermore, plants such as bananas, pumpkins, and salad greens are grown between the coffee plants to make the soil richer. They are then sold throughout Brazil. In the natural method, nothing is done to the coffee plant. The plants are grown close together and the only intervention of the farmers is the harvesting of the beans.

From Farmlands to the Supermarket

Duchy Originals – UK

 United Kingdom

Back in the 1980s, the UK's Prince of Wales recognized that the long-term future of environment and farmland was extremely important and should not be sacrificed. In 1986, he arranged for part one of his country's farms to be converted into organic farmland. Pleased with the results, he commissioned some research into whether there was a market for the organic food produced from all the natural ingredients and sustainable farming techniques designed to preserve the health of the land.

The results of the market research were positive, and in 1992, a biscuit made from the organic oats was marketed to the British public under the name Duchy Originals. In 1999, Duchy Originals began to make profit, and the Prince donated all of it to various charities. Duchy Originals now markets over 200 products throughout the United Kingdom, ranging from bakery goods to meat; and over six million pounds has been donated to the Princes' Charities Foundation.

Sekem – Egypt

 Egypt

In the 1970s, an Egyptian, Dr Ibrahim Abouleish, bought some land in the desert bordered by farmland. His mission was to develop it and to improve crop harvests using biodynamic methods. Biodynamic farming is a sustainable farming method that uses natural fertilizers to maintain the balance between the soil and plants. Abouleish named his agricultural venture Sekem. He gave the Bedouins from the area work and allowed them to build homes on the land.

In 1983, Sekem began marketing organic herbal teas such as mint and chamomile in Egypt. Sekem guaranteed organic herbs in pre-measured packets, making them more convenient.

Sekem expanded its organic food production, and in 1988 Libra Egypt was formed to export organic Egyptian fruits and vegetables to Europe. To serve the European demand, many farms throughout Egypt switched to biodynamic farming methods. Sekem began to advise many of these farms and leased more lands of its own. In addition to this, some of the company's profits were invested in social projects, including schools for children and adult education centre.

My Unusual House

Homes, Vocabulary & Phrasal Verbs

LECTURE CONTENT

- 1 Three Unusual Homes: Fire Station, Lighthouse, Houseboat
- 2 Vocabulary: Match the Definitions (Text A, B, C)
- 3 Verb Phrases with "Take"
- 4 Complete the Sentences with "Take"
- 5 Phone Calls Phrasal Verbs

My Unusual House

A – Fire Station

I live in an old fire station that I converted into a house last year, when I moved out of my parents' place. My friends thought I was **out of my mind** at first, but now they love it, too. It's a spacious building, so I've got plenty of room to put all my **belongings**. I've even got my own gym and entertainment room! My friends often **drop by**, so I never get lonely living here. The only **drawback** is that I've got more expenses than before, for heating during the winter and furniture to fill up the **space**. Most people want to know if I use the fire pole. The answer is – all the time!

B – Lighthouse

People usually wonder why I chose to live in a lighthouse. The truth is I wanted first-hand experience as I'm currently writing a book about living in a lighthouse. So I chose it as my **temporary residence**. I **settled in** very quickly and I try to enjoy every minute of it. I'm a long way from shops and restaurants, but I don't mind, though. I love being so near the sea. Every morning I climb the **spiral stairway** to the top of the **tower** and drink my coffee while admiring the view. That's when I remember how lucky I am **at the moment**. Of course, there are days when it seems like the loneliest and most **isolated** place in the world, but at least I've got **access** to the internet and I can **stay in touch** with my friends and family.

C – Houseboat

A few months ago my wife and I bought a houseboat. In the beginning, we only stayed for few days at a time, but now we've decided to make it our **permanent** home and we are **moving in** at the end of this week. The truth is that we **face** many difficulties and we're still trying to **get used to** it. For one thing, it's a little bit **cramped**, and we have to use space wisely. Also we haven't got electricity all the time and when we go shopping, we can't buy a lot because it's a long walk to the boat with heavy bags. We might be far from shops, but we're in a great location and we still have our peace and quiet. Not many people wake and see swans outside their window or "float away" if they get tired of the view!

Where Do Words Come From?

How do new words enter language? Who coins new words? Sometimes the inspiration for a word is obvious. For example, in the 1960s, **calculator** made its first appearance in everyday English. Its name was based on its apparent function: to calculate.

Sometimes a word or a name is **eponymous**. This means that it takes its name from the person who discovered or invented the object. The radioactive element **Einsteinium** is an example of an eponymous word, taking its name from the famous scientist Albert Einstein. Other words are **toponymous**; they take their name from the place where they invented or made famous. An example of a toponymous word is **tangerine**, which comes from the city of Tangiers in Morocco, where the fruit is abundant. Another example is the word for the material **denim**, which originated in Nimes, France. The material was said to be 'de Nimes' or 'from Nimes'.

Sometimes people simply invent words. **Milton Sirota** is documented as the youngest person ever to coin a word that is in use today. He coined the words **googol** and **googolplex** when he was nine years old. Sirota's uncle was a mathematician called Edward Kasner. Kasner wanted to find a name for an extremely large finite number – the number 1 followed by 100 zeros. One day in the late 1930s, Kasner asked his nephew about it for a moment and then suggested *googol*.

Kasner was delighted. He had finally found a name he liked. Sirota also suggested the term *googolplex* for the number 1 followed by zeros until a person got tired of writing them. Kasner appreciated the boy's **ingenuity**, but pointed out that no two people would tire at precisely the same moment. As a result, Kasner defined the googolplex as the number 1 followed by a googol of zeros. This made googolplex a finite number, although it was unimaginably large.

Where Do Words Come From?

It's highly unlikely that Sirotta or Kasner ever imagined what would happen to the words they coined so many decades ago. What is more **intriguing** about Sirotta and Kasner's story is that their creations are, in a way, now known by millions, if not billions, of people around the world.

In 1990, two computer science graduate students at a California University created a new search engine. After working for more than a year to perfect it, the students and several of their fellow office workers had a number of **brainstorming** sessions to find the right name for this **innovative** tool. They wanted a name related to the indexing of a **colossal** amount of data, so someone suggested 'googol'. One of the students liked the idea, and asked his friend to check if the name was available for a web address. According to the story, although the students were brilliant computer scientists, they were bad at spelling, and instead of searching for 'googol.com', they searched for '**google.com**'. They found that this web address was available. They realized their error, but they preferred the **unconventional** spelling, so they registered the web address www.google.com.

Unfortunately, neither Kasner nor Sirotta lived to see the internet age. Kasner **passed away** in 1955 and Sirotta **passed away** in 1980. Neither of them found out how the word they had coined inspired the name of the most popular search engine in the world.

A Book or a Film

Talk like this:

- ☒ What is the name of a memorable film/book?
- ☒ Who were the actors/characters in that film/book?
- ☒ Why did you like it?
- ☒ What are the factors behind the success of this film/book in your opinion?
- ☒ Are you going to watch/read similar ones?

EXAMPLE ESSAY

My favourite film is *The Pursuit of Happyness*. It stars Will Smith as Chris Gardner, a struggling salesman who becomes homeless with his young son. The film is based on a true story and it is incredibly inspiring. I liked it because it shows how determination and hard work can help you overcome even the most difficult situations. The acting is excellent, and the relationship between the father and son is very touching.

The success of this film comes from its powerful message about never giving up on your dreams. It also shows the importance of family and perseverance. Many people can relate to the struggles that the main character faces, and that makes the film very engaging.

I would definitely recommend this film to anyone who enjoys inspiring and emotional stories. I'm planning to watch similar films like *The Shawshank Redemption* and *Good Will Hunting* because I enjoy stories about overcoming challenges.

A Tiny Step to Save the Environment

What is the tiny home like?

A house is classified as a tiny home if its living space is less than 13 square metres. Some tiny homes are as small as 6 square metres. Although they are small, they are made of quality materials. They can **withstand** freezing temperatures and strong storms. In addition to this **durable** construction, another important characteristic of a tiny home is that it's **portable**. Constructed on wheels, they may be pulled behind a van or a powerful car. Because of their portability, owners of tiny homes often move them to different locations. Professor Shafer has lived in the middle of an apple orchard, beside a lake in the mountains, and in the Redwood forest of California.

What is the incentive to live in a tiny house?

People choose to live in tiny houses for a variety of reasons, not least because they are much cheaper and more economical to run. Primarily the owners share certain beliefs, namely a concern for the environment and the desire to reduce consumption of **material** goods. Professor Shafer recalls growing up in his parents' huge home, annoyed by the **exorbitant** heating and cooling bills. A tiny home can be heated for an entire winter in a snowy climate for less than €70. This also includes the cost of heating water for showers and washing up. Tiny home residents also save money because they are unable to store much in their homes. Due to space limitations, they cannot buy something unless they truly need it. This decreased spending reduces the number of unnecessary purchases, leading to less waste.

A Tiny Step to Save the Environment

Where are the appliances in a tiny house?

Although a tiny house has limited space, it still contains modern conveniences such as a fridge and a toaster oven. A portable TV fits neatly in a cupboard next to a laptop computer. Electricity is supplied in a variety of ways. Some owners use solar panels while others' electricity needs are met by wind-powered **generators**. The tiny house can be connected to a public water source via a tube.

How can more than one person fit in a tiny house?

There are tiny houses which are home to married couples. The living room can hold two comfortable chairs, and the bedroom located in a **loft**, is accessible by a ladder. Although it's not possible to stand in the bedroom, two people can sleep comfortably in it. It is also possible to entertain in a tiny house. Professor Shafer has a **fold-up** table that holds place settings for four people, although the plates must be quite small. Some tiny homes have fold-out benches so that as many as six guests can be **accommodated**, although it is quite difficult to move around.

Downsizing

Professor Shafer was **undaunted** by the thought of **getting rid of** many of his personal belongings so that he could live full-time in such a small home. He packed up the clothes that he never wore and the books he never read and gave them to friends or **donated** them to **charity**. Once he had **downsized**, he moved into his first tiny home, which he called Tumbleweed.

Match the Definitions

Subject: Application for Assistant Researcher

Dear Ms Jones,

I am writing in reply to your advertisement in the Daily Herald for the post of Assistant Researcher. I will graduate in Digital Media this month from Manchester University. I have experience in film production and post-production as I have worked part-time in my university television station for the last year.

I consider myself to be hard-working and organized in my work. As part of my job with the university television station, I was responsible for planning schedules and programme archiving.

I am available for interview at any time and available to start work after July. I am willing to relocate if necessary.

Please find my attached CV which gives full details of my qualifications, work experience and skills as well as my contact details.

I look forward to hearing from you.

Yours sincerely,

Mark Stevenson

Symbols of Power

An Object

The ballot box has perhaps become one of the great symbols of democracy. It represents the power of the voters to elect their own leaders. The name 'ballot' comes from 'ball'. At one time voters used a small black ball to vote in elections, instead of paper, or nowadays, an electronic vote. Many ballot boxes are transparent so that people can see they were empty at the beginning of voting. The idea of transparency, that people can see everything, has become a symbol, too - of honesty.

Directions

The directions left and right are used as symbols for political views. Political parties with more socialist views are called **left wing**, while parties with more conservative views are called **right wing**. This symbolism comes from the French Revolution, where liberal members of parliament sat to the left of the president and conservatives sat to the right.

Colours

Light blue is the colour of the United Nations. It was chosen because it is the colour of the sky above every nation on Earth. The colour is used as a **protective** sign on the hats of peacekeeping forces so that they are not mistaken for the enemy. Other colours with political meaning are red and green. Red is the traditional colour for socialism and communism, while green is a symbol for parties mainly concerned with the environment.

Symbols of Power

Buildings

Government buildings are symbols of power and they are often designed to be large and impressive. In the USA, many public buildings were built to look like buildings from **ancient** Greece and Rome. There was a political message here - like the USA - ancient Greece and Rome were republics, too. Meanwhile, during the time of the Soviet Union, government buildings were massive to remind the public of the great power of the state.

★ A Shape

The five-pointed star is a very common symbol of military power, and is used on military vehicles and uniforms in many countries. It is also a very common national symbol and is used on the flags of 35 countries. For example, there are 50 stars on the flag of the USA, and they represent the states in that country. The symbol for the European Union also includes stars to represent the member nations.

Animals

Countries often have an animal as a national symbol. Lions and eagles are very popular symbols because they represent **strength**. For example, Bulgaria, England, and the Netherlands have the lion as the national animal, and the USA, Mexico, and Austria have various kinds of eagle. Other countries use animals which are very characteristic of the region, for example the kiwi in New Zealand or the springbok antelope in South Africa.
